

LIST OF CLAIMS / AMENDMENTS**In the Claims**

Claims 17-28 were previously canceled without prejudice in response to
5 a restriction requirement (*Office Action* dated June 7, 2005).

Please cancel claims 1-16 without prejudice.

Claims 17-28 are now pending and are listed following:

1-16. (canceled)

10

17. (previously presented) An input device, comprising:
a pointing device; and

a scanning device integrated with the pointing device, the scanning
device having a virtual scan mode in which the input device is configured to
15 scan an image on an electronic page that is rendered on a display.

18. (previously presented) An input device as recited in
claim 17, wherein the pointing device comprises a wireless mouse.

20 19. (previously presented) An input device as recited in
claim 17, wherein the pointing device comprises an optical mouse.

20. (previously presented) An input device as recited in
claim 17, wherein the pointing device is a mouse and further comprising a
25 memory to store an image captured with the scanning device.

21. (previously presented) An input device as recited in claim 17, wherein the pointing device is a mouse having a switch configured to toggle between a first position in which the input device functions as the pointing device and a second position in which the input device functions as the scanning device.

22. (previously presented) An input device as recited in claim 17, wherein the input device is configured to activate scanning software in a computing device when the input device is configured as the scanning device.

23. (previously presented) A system, comprising:
a computing device having a display and a processor;
an input device communicatively linked to the computing device to operate as both a pointing device and a scanning device, the pointing device being configured to generate an input to the processor and the processor being configured to translate the input for rendering on the display; and
wherein the input device comprises a switch that has a first position in which the input device functions as the pointing device and has a second position in which the input device functions as the scanning device to scan an image on an electronic page that is rendered on the display.

24. (previously presented) A system as recited in claim 23, wherein the input device further comprises a memory to store the image scanned from the electronic page.

25. **(previously presented)** A system as recited in claim 23, wherein the input device is configured to activate scanning software in the processor when the scanning device is activated.

5 26. **(previously presented)** A method, comprising:
positioning an indicator on a display corresponding to an input
generated with an input device functioning as a pointing device;
switching functionality of the input device from a pointing device to a
scanning device having a virtual scan mode; and
10 scanning an image that is a section of an electronic page rendered on the
display.

27. **(previously presented)** A method as recited in claim 26,
further comprising activating scanning software when switching the
15 functionality of the input device to the scanning device.

28. **(previously presented)** A method as recited in claim 26,
further comprising saving the image in a memory component in the input
device.
